**CENSUS BUREAU RELEASES POPULATION FIGURES
FOR CALIFORNIA REDISTRICTING**

Sacramento -- Redistricting is the process by which Assembly, Senate, Board of Equalization and Congressional districts are adjusted every ten years to take into account changes in state and national population. Districts are drawn at the beginning of each decade so that they are as equal as possible in population. However, over the course of the decade, there are population shifts, and by the end of the decade, the districts are often significantly unequal in population. Redistricting is the way this inequality is corrected.

The 2001 redistricting will be based on population information from the 2000 census. The 2000 Census took place on April 1, 2000. The Census Bureau attempted to count every person who resides in the United States. This includes non-citizens who have permanent or temporary residency status, refugees, the homeless and undocumented residents. It does not include visitors to the United States.

California will gain one Congressional seat because of its population increase in the past decade. A new 53-seat Congressional plan and new legislative plans, taking into account population shifts, must be in place for the 2002 statewide elections.

In December 1975, Congress passed Public Law 94-171, which specifies that within one year of Census Day, the Census Bureau must send each state the data to be used to redraw federal and state legislative districts. The law requires the Census Bureau to provide redistricting data no later than April 1, 2001, to the 50 states, the District of Columbia and Puerto Rico. The California State Assembly will use Census data provided by the Census Bureau pursuant to Public Law 94-171 to redraw its district lines. The California State Senate and State Assembly, with the consent of the governor, have the responsibility of drawing the new district lines.

The Assembly Elections, Reapportionment and Constitutional Amendments Committee is making public the current population figures for all state and federal legislative districts.

-- more --

The attached charts show: a) the population in each district as of April 1, 2000; b) the average number of persons in an ideally proportioned district (i.e., the total number of persons divided by the number of districts in each category); and c) the deviation in each district from the 2000 Census ideal average (i.e., how much each district's population will have to be adjusted).

The Census population data will be made available for a nominal cost at the "Statewide Data Base" of the Institute for Government Studies at the University of California at Berkeley. This web site is: <http://swdb.berkeley.edu>.

The charts below will also be available in P.D.F. form at the Assembly Elections, Reapportionment and Constitutional Amendments Committee web site at www.assembly.ca.gov/erca
